

ABSTRACT OF THE DISCLOSURE

A digital camera is mounted on a camera mounting unit of a cradle, and supported as swayable. When the digital camera is tilted forward, a front switch is turned on, and a command to change into a storage mode is issued from a switch determination circuit to the digital camera. When the digital camera is tilted backward, a back switch is turned on, and a command to change into a PC camera mode is issued from the switch determination circuit to the digital camera.
